

Hand Cleaning Paste

is a solvent-free cleansing paste to remove medium to heavy industrial dirt from the skin.

A printer's hands are exposed to a diversity of aggressive substances during the course of everyday work: Inks, coatings, lubricants and other chemicals. This skin-friendly cleansing paste was developed to permit at least gentle washing. Tensides ensure pore-deep removal of all dirt and oily residues without causing dry skin. Fine PUR particles support the cleansing effect.

Safety notes:

- No health hazards to be expected in case of proper use
- Store the securely closed container in a cool place

Tips for use:

- Apply a small amount of Hand Washing Paste (approx. 2 to 3 g) on the dry hands
- Subsequently moisten the hands and rub together thoroughly
- Clean also the dirt from under fingernails
- Once the dirt has been fully dissolved, rinse with water and dry the hands

Important:

We recommend regular use of Hand Washing Paste, as the recipe has been tailored precisely to the daily demands of the printing profession, achieving an optimum cleansing effect while at the same time ensuring protection for the skin.

Packaging:

Hand Washing Paste is supplied in 550g PET cans.

Further information

Please refer to the label and product safety data sheet.

Manufactured in a process governed by ISO 9001.

Complies with AFNORT 73–101 specifications.
